| <b>Role</b>                | Angular Frontend Developer / Ux / Ux developer                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Project Description</b> | The KENERGY Admin Dashboard is built using Angular to manage and monitor the health treatment platform's backend operations. The platform is designed to give administrators a centralized interface to manage user data, track health analysis results, view treatment recommendations, and monitor system performance. The admin dashboard includes data visualizations, real-time health reports, and system insights to ensure optimal operations and patient care |
| <b>Technologies</b>        | Angular 14+                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Responsibilities</b>    | <ul style="list-style-type: none"><li>• Developed and maintained the KENERGY Admin Dashboard using Angular 14+ to provide a dynamic, real-time interface for administrators.</li><li>• Enhanced UI/UX with responsive designs using Tailwind CSS, SCSS, and Material UI.</li><li>• Integrated RESTful APIs for seamless communication between the frontend and the platform's backend, allowing administrators to fetch and manage health data.</li></ul>              |

| <b>Project Description</b> | Nebu.la is a blockchain-based music token sale platform that allows artists and investors to tokenize music assets, enabling fractional ownership and transparent transactions. The platform provides a secure and decentralized marketplace for buying, selling, and trading music-related tokens using smart contracts on the blockchain. Users can explore real-time analytics, track transactions, and manage digital assets through an intuitive and interactive dashboard.                                                        |
| <b>Technologies</b>        | Angular 16                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Responsibilities</b>    | <ul style="list-style-type: none"> <li>• Developed and optimized Angular 16+ components, modules, and services to build a scalable, maintainable frontend. Diagnosed and resolved issues to improve app stability and give users a seamless experience.</li> <li>• Enhanced UI/UX using Angular Material, Tailwind CSS, and SCSS, ensuring a modern and responsive design.</li> <li>• Collaborated with blockchain developers and UI/UX designers to ensure seamless integration of smart contracts and frontend components.</li> </ul> |
